FILTRONA

the difference is {everything}

Redefine the possible.

Infused is the most affordable filter from Filtrona Filter Products; with up to 30% cost saving versus standard cellulose acetate filters*. Redefining what you thought was possible with paper; Infused uses specially developed additives to ensure you maintain the familiar taste at a lower cost.

The filter, patented by Filtrona Filter Products, has been developed to maximise the strengths of paper and this includes offering up to 40% higher tar retention than standard mono-acetate filters*.

As part of the Advantage range of filters, Infused filters are the epitome of innovative, balanced design to reduce the overall cost of your products, without compromising on taste or quality.

For more information on Infused and the Advantage range, [click here](#)

*Varies by specification and test conditions. Filtrona Filter Products recommend that you order samples for your own verification
